

Fernando Bersellini Teixeira

Fullstack Developer

Londrina, Paraná, Brazil | fernandobersellini@outlook.com.br | linkedin.com/in/fernandobersellini | github.com/FernandoBersellini

Professional Summary

Fullstack Developer focused on Next.js, Nest.js, and TypeScript. Experience with B2B platforms, systems integration, authentication, and analytical dashboards, in an agile environment with frequent releases.

Experience

Enova Educacional

Londrina, Paraná, Brazil

Fullstack Development Intern

Nov 2025 – Apr 2026

- Worked as a fullstack developer on the MVP of a B2B corporate mental health platform for thousands of users, as part of a 5-developer team, contributing to critical product flows from data modeling through to the final interface.
- Built around 10 responsive interfaces in Next.js and React.js with pixel-perfect fidelity to **Figma** designs, ensuring visual consistency between the approved prototype and production across different devices, and integrating them with in-house endpoints in **Nest.js** and **PostgreSQL**.
- Implemented a two-layer corporate authentication flow, integrating **Supabase Auth** with cross-validation against a local PostgreSQL database - an architecture that ensures only employees pre-registered by client companies can access the platform.
- Implemented an analytical dashboard using the **Recharts** library, capable of reading thousands of raw PostgreSQL records into interactive charts to support decision-making for corporate clients.
- Worked within a Kanban flow with code reviews, backlog refinement, and version control via Azure DevOps.

Personal Projects

OpenFeed – Fullstack Social Feed Application with Production Deployment

Frontend: github.com/FernandoBersellini/openfeed-frontend

Backend: github.com/FernandoBersellini/open-feed

- Built a fullstack social feed application (posts with tags, likes, and comments), with a backend in Java 21 and Spring Boot integrated with PostgreSQL via Supabase, and a frontend in React.js consuming the API via Axios.
- Implemented JWT authentication via HttpOnly cookies, with CSRF protection and rate limiting on API routes, going beyond basic tutorial-level web application security.
- Diagnosed and resolved a real production issue: the session cookie stopped working because Fly.io's proxy terminated the HTTPS connection and forwarded the request internally as plain HTTP, causing Spring to reject the cookie's Secure attribute across different domains. The fix involved trusting the X-Forwarded-Proto header and rethinking how the CSRF token was delivered between the frontend (Vercel) and backend (Fly.io).
- Carried out a real production deployment with the backend on Fly.io and the frontend on Vercel, in separate repositories versioned on GitHub.

Skills

- **Languages:** JavaScript, TypeScript, Java 17+
- **Frameworks and libraries:** Next.js, Nest.js, Spring Boot, Node.js, Recharts, TypeORM, Axios
- **Frontend:** HTML5, CSS3, React.js, Tailwind CSS, responsive design (mobile-first)
- **Databases and backend:** PostgreSQL, MySQL, Supabase, REST APIs, JWT authentication (Bearer and HttpOnly cookie), CSRF, rate limiting, bcrypt
- **DevOps and infrastructure:** Docker, Docker Compose, GitHub Actions (CI/CD), Railway, Fly.io, Vercel, Azure DevOps, Linux
- **Quality, tools, and processes:** unit and e2e testing with Jest, ESLint, Prettier, Git, Scrum, Kanban, Figma, AI-assisted development (Claude Code), prompt engineering
- **Spoken languages:** Portuguese (native), English (fluent)

Education

Centro Universitário Filadélfia - UniFil

Londrina, Paraná, Brazil

Bachelor's in Software Engineering

Sep 2024 – Jun 2028 (expected)

Senac Londrina

Londrina, Paraná, Brazil

IT Technical Degree

Aug 2022 – Jul 2024
